The plating unit is built for gold and rhodium plating on jewellery. Pieces must be first degreased, then they can be gold or rhodium plated. Also we use two tone process in plating system. The two tone process we done by using masking tape and lacker. It is easy to complete the process on normal surface or small work but we can't done the two tone process in critical areas and more work is taking so much time and take man power in huge way, that time the pave process is a method that define or critical areas, in a selective way without using plating obtaining multicolor plating's. This process is saves the time without using more man power.

## Features :

- ▶ Filter pump with 10 inch cartridge.
- ▶ Rectifier 16 V – 50 Amp
- ▶ Phosphorus copper anode with hexagon shape
- ▶ Anode meraklon bag.
- ▶ Timing and voltage controller.
- ▶ Automatic temperature controller.
