

Wooden Media

(0.3 MM)

Marketed by :

Mass Polishing Finishing Compound is a type of material used in mass finishing processes to improve the surface finish of parts and components. It is typically used in conjunction with tumbling machines, such as vibratory tumblers or centrifugal finishing machines, to help produce high-quality, consistent finishes on parts and components. Mass finishing polishing liquid is a liquid solution that is applied to the surface of the parts being processed. It typically contains a combination of abrasives, lubricants, and other additives designed to create a smooth, polished finish on the parts surface. One of the key benefits of mass finishing polishing liquid is its ability to produce high-quality, consistent finishes on a wide range of materials. It is versatile and efficient, and can be easily adjustable to meet the specific polishing requirements of a given application. Additionally, mass finishing polishing liquid is easy to apply and clean up, making it a cost-effective and efficient solution for many mass finishing processes.

Wooden Media

Wooden media, also known as wood chips or wood pegs, is a type of media used in vibratory or tumbling processes for surface finishing and deburring, and polishing applications. It is made from various types of wood, such as hardwood or softwood, and comes in different shapes and sizes. Wooden media offers specific advantages for certain types of parts and finishing requirements. Here are some key features and benefits of wooden media:

Features

- ▶ Impeccable performance
- ▶ Smooth finish on Parts
- ▶ High Strength for less wear and tear
